ANNUAL OPEN HOUSE

MINICK SALESMEN ATTEND 2009 PONDEMONIUM®

Minick Salesmen, Bryan Moore and Dustin Bringham, recently attended Aquascape's "Pondemonium®" in Chicago, Ill. Pondemonium® is the largest educational event in not only the water feature industry, but all of the Green Industry as well. Aquascape designed this intensive hands-on event as a creative outlet of free-flowing ideas and each year it gets bigger and better.

We can answer your water feature questions! Give us a call today at (405) 789-2068!

ANOTHER SATISFIED CUSTOMER --

"I do not know why more people don't do this kind of stuff. We have saved, according to bids we have gotten for the things we have done, well over \$10,000.00 by doing the projects ourselves and have had great fun doing it. If I needed help I would just ask one of your people and they would give me the answer I needed."

"We love this kind of service and you can count on our business because of it. Your prices and selection are the best and we have shopped everywhere."

Dr. Richard and Rita Tate

BelAir Wall™ Collection

An excellent alternative to traditional retaining wall systems. Timeless multi-piece design for maximum versatility. Engineered for easy installation and alignment. Ideal for a wide range of applications, from sweeping curved walls and raised patios, to steps and columns.

BelAir Wall™ offers designers, contractors and homeowners the ideal solution for residential and light commercial retaining and freestanding wall construction where pleasing aesthetics are a key consideration. The attractive multi-piece design and blended colors offer an alternative look to traditional retaining wall units. The design of this easy-to-use product allows for sweeping curves. The system can be used in applications ranging from curves to corners, terraces to raised patios, or steps to columns.

BelAir Free-standing

When to Use a Pattern for Freestanding Walls

You can install the BelAir Wall™ freestanding wall system in a random pattern using any combination of units. Just avoid vertical lines that span more than 18 inches in height. If you are building a straight wall, use a pattern for inspiration or follow a pattern exactly. Pleasing random patterns can be built using an equal square footage of 3- and 6-inch-high units. The estimating formulas in this brochure are based on using an equal square footage of units of each size in each height. When using a pattern, begin at one edge laying the units as indicated. Install at least one repeat of the pattern to establish the pattern before proceeding to the next course.

BelAir Free-standing

When to Use a Pattern for Retaining Walls

You can install the BelAir Wall™ retaining wall system in a random pattern using any combination of units. Just avoid vertical lines that span more than 18 inches in height. If you are building a wall without geosynthetic reinforcement, use a pattern for inspiration or follow a pattern exactly. Pleasing random patterns can be built using an equal number of 3- and 6-inch-high units. The estimating formulas in this brochure are based on using an equal number of units of each size in each height. When building a wall that includes geosynthetic reinforcement, using a pattern at the appropriate spacing eliminates the need to cut the grid. When using a pattern, begin at one edge laying the units as indicated. Install at least one repeat of the pattern to establish the pattern before proceeding to the next course.

BelAir Retaining Wall

Please contact our office at (405) 789-2068 for color samples available in your area.

This product is manufactured with Sculpsit(TM) technology licensed from Anchor Wall Systems, Inc.

Killdeer Nesting site at Lake Hefner

Minick Materials supplied the 1 ½" Crusher Run gravel for this Killdeer Nesting Site at Lake Hefner.

Killdeer nest on open ground, often on gravel. The speckled eggs themselves look like stones.

The project was completed by Scout Andrew Middleton for the Oklahoma Audubon Society.

Check our website for weekly specials!

Although we are not architects or engineers, Minick Materials has many years of experience in the stone and soil trade. We can help you with difficult details by relying on our knowledge of other commercial, residential and public projects. Here's what a local landscape architect has to say about Minick Materials:

"I appreciate that Minick Materials is a valuable resource for information on materials we use in site design. I can ask a (seemingly foolish) question about gravel or a more detailed question about structural soils and know that I will get an informative, accurate response.

They know their products, and they keep them available locally."
