MINICK MATERIALS RECOGNIZED AS ECONOMIC DEVELOPMENT PARTNER

The Oklahoma State Regents for Higher Education recognized Minick Materials Company as an outstanding economic development partner at a ceremony held April 14, 2009 at Oklahoma City Community College.

Minick Materials, a family-owned company and one of the largest landscape material distributors in the region, partnered with Oklahoma State University-Oklahoma City, by donating all materials as well as 562 hours of labor to the beautification project for the new OSU-OKC Agricultural Resource Center. Their partnership began in the 1980s when Sam Minick was a student in the OSU-OKC horticulture program. Over the years, Sam developed a lasting partnership with OSU-OKC and Dave Edwards, ARC division head. As the ARC was being constructed, Sam expressed an interest in designing a creative and innovative landscape setting to include seating areas, display gardens and a state of the art water harvesting system. This system captures water run-off, cycles it through a water aeration system and then filters it to an underground holding tank that will supply water for an aboveground water feature. OSU-OKC has been transforming the campus to be energy efficient and this water harvesting system provides a green solution for landscaping and water conservation. This project showcases emerging and innovative technologies in water management and sustainable landscape practices for current and future students of the OSU-OKC horticulture programs.
